

ServDentist™ Solo

An interactive visual interface
for a private consultation

ServDentist Solo is an interactive visual interface use for a private consultation. An easy and effective visual communication solution designed specifically for treatments rooms.

ServDentist Solo provides treatment plan coordinators with a unique opportunity and privileged connectedness to more effectively communicate by using specialized dentistry content easily and instantly, with almost no effort and intervention from your part.

Thanks to our interactive visual interface, our solution makes it easy to choose and presents your selected clips on your screen. You can deliver dynamic and high-quality 3D animations with photos and video sequences, backed up by a narrative in French or English, for compelling cutting-edge communications.

This easy to use and very effective solution helps you optimize your work and increase the acceptance rate of proposed treatments plans to your patient for a more enlightened decision. This solution allows you to guide and educate patients about their oral condition, informing them about available options treatment and the many benefits they can derive from them vs the foreseeable consequences if nothing is done.

« The comprehension by the patient, of his condition, is essential to the establishment of a relation of trust, and hence of acceptance of dental treatments... and Mordicus is a unique, well-adapted tool... we could no longer do without it! The "Dental" communication is greatly enhanced... Well done! »

Dr Vincent Ballivy,
Dentist

ServDentist Solo Interactive Visual Interface

ServDentist Solo Interactive Visual Interface is simple and easy to use. This service allows you present your selected clips on your screen and deliver dynamic and high-quality 3D animations with photos and video sequences, backed up by a narrative in French or English.

Through the partnership with Mordicus, this solution offers you a light or complete version offering 53 visual scenarios of distinct treatments as well as three new options: a photo album, a printable treatment plan with images and a 3D animation model of the cranium, permitting the screening of the internal and external structures of the human skull under every desired angle.
